INVOICE TECHNICAL SPECIFICATION
DEDICATED FOR DEDEMAN PROJECT
VERSION 4.0 - EDInet XML

1. Dictionary / Dicționar

M – mandatory, D – dependent, N – numeric, AN – alpha numeric

2. Units of measure / Unități de măsură

UNITS OF MEASURE		
COL= coli	M3= mentru cub	ML - mililiter
SET= set	M2= metru patrat	
ROL= rola	M= metru	
L= litru	BUC= bucata	
PAL= palet	PUN-bag	
PAC= pachet	CUT - CUTIE	

3. Details / Detalii

Data	YYYY-MM-DDTHH:MM:SS or(vagy) YYYY-MM-DD
Numbers	Decimal separator: point, is not used for grouping separator characters (eg 10,234.12 wrong, correct: 10234.12) / Separator zecimal : punct, nu este folosit ca separator pentru caractere grupate (10,234.12 gresit, corect : 10234.12)

4. Shortcut / Abrevieri

GLN = Global Location Number:

GTIN = Global Trade Item Number:

EAN = International Article Numbering Association:

5. Tipuri facturi (Invoice types)

Cinci tipuri de facturi au putut fi gestionate pe baza profilului de facturare electronica din Ungaria.

- factura comerciala care ar putea fi partiala sau finala
- factura proforma
- factura preplata
- factura storno, in care trebuie mentionata factura originala sau referitor la o linie cu articole trebuie sa fie o referinta la factura originala si valoarea totala trebuie sa reflecte directia in care merg banii. Daca cel ce emite factura (de obicei furnizori) au datorii catre cei ce le este adresata (comercianti de obicei) atunci valoarea totala este negativa. Daca comerciantii platesc emitentul unei facturi (de obicei furnizori) atunci valoarea finala trebuie sa fie un numar pozitiv. Acest lucru se refera si la factura de corectie.

Corectarea unei facturi se poate efectua in mai multe feluri.

- Factura incorecta trebuie sa fie creditata in intregime cu o factura storno, apoi o noua factura poate fi emisa
- Articolele din factura storno trebuie sa fie identice cu cele din factura de referinta dar cu semn minus
- Factura de corectare contine articolele incorecte cu semn negativ urmate imediat de articolele corecte fara semn
- datele articolului original trebuie date cu semn negativ
- datele articolului modificat trebuie date fara semn
- Factura de corectare contine numai diferenta intre valoarea corecta si cea incorecta a unui articol

Five kinds of invoice could be managed on the basis of current e-invoicing profile for Romania.

• Commercial invoice which could be partial or final invoice

• Proforma invoice

• Prepayment invoice

• Storno invoice, in which there must be a reference to the original invoice or to a given line of its Correction invoice, in which there must be a reference to the original invoice or to a given line of its Items on the invoice and the total value of it must reflect the direction to where money moves. If the issuer of an invoice (usually suppliers/manufacturers) owes the invoicee (usually traders) then the total value is a negative number. If the invoicee (usually traders) pays the issuer of an invoice (usually suppliers) then the final value must be a positive number in every case. This rule also refers to the correction invoice.

The correction of an invoice can be applied in several ways. The correction of an invoice could be done with an appropriately produced correction invoice whether the sender realizes immediately or later that he started a wrongly filled invoice message.

- The incorrect invoice could be entirely credited with a storno invoice, then a new flawless invoice could be issued
- The items of a storno invoice must be identical to the reference original invoice with opposite sign
- The correction invoice contains the incorrect items with negative sign immediately followed by the correct items without a sign.

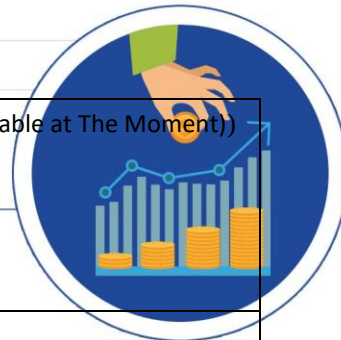

- the data of the original item must be given once with negative sign
- the data of the modified item must be given once without a sign (positive)
- The correction invoice contains only the difference between the correct and incorrect value of an item.
